

Fold Rollers

The heart of your folding machine

**Standard
TF-66**

**Soft P.U.

**Super Grip Soft P.U.
TF-66**

In order to obtain consistent high quality folding and to gain maximum productivity from your folders, you must have positive grip and steadfast performance to properly control the sheet through out the folding process.

Worn rollers will lead to poor quality folding, longer make-ready times and frustrated operators. If you are ready to replace your rollers we invite you to look at ours.

Our combination fold rollers are produced with special steel and knurl that matches OEM parts. They are covered with your choice of standard polyurethane or special soft foam urethane.

MBO Spiral Fold Rollers are also produced with the same high quality steel. OEM style knurl is used and then covered in either standard urethane or super grip foam urethane.

**Standard
B-26**

**Super Grip
